

AWS infrastructure

AWS infrastructure

- **Amazon DynamoDB** - Big data storage for NoSQL files such as tables and json files.
- **Amazon Kinesis Data Streams** – Streaming data to be processed at Databricks.
- **Databricks** – Processing big data in parallel, using spark.
- **Simple Storage Service** – Storing data that will be fetched frequently.
- **Amazon Sagemaker** – Use of the Jupyter Notebook to run the AutoML.
- **Amazon Elastic Container Service** – For serving API in a containerized environment in the cloud.
